CLAIMS

1. A laser processing apparatus for processing a subject to be processed by irradiating the subject with laser light, the apparatus comprising:

5

10

15

a laser head for emitting laser light;

a cooling jacket for holding and cooling the laser head;

an optical system main part for adjusting the laser light emitted from the laser head to a predetermined characteristic; and

a regulator, disposed between the cooling jacket and optical system main part, for adjusting a position and inclination of the cooling jacket with respect to the optical system main part.

- 2. A laser processing apparatus according to claim 1, wherein the cooling jacket holds and cools a shutter unit for opening and closing an optical path of the laser light emitted from the laser head.
- 3. A laser processing apparatus according to claim 1, wherein the optical system main part comprises:
 - a beam expander for adjusting a beam size of the laser light emitted from the laser head;
- a subject observation optical system for observing the subject; 20 and
 - a processing objective lens for converging the laser light onto and within the subject.
